                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                609/c
             This sequence represents a partial human nucleotide sequence that codes for EZA binding protein (EZA-BP, see #35815). It was isolated from a human aortic expression library using the bHLH domain of E47 as probe. EZA-BP is expressed in vascular smooth muscle cells; mRNA is preferentially expressed in the aorta. EZA-BP interacts with EZA proteins in vivo, binds to both E12 and E47 and inhibits binding of E47 homodimer to an E-box probe (see T97606). A full-length DNA sequence is given in T97610, and mouse (see T97611) and rat (see T97612-13) EZA-BP sequences have also been isolated. EZA-BP nucleic acids may be used in gene therapy and antisense methods for treating vascular diseases such as arteriosclerosis, to produce transgenic or knock-out animals,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polynucleotides encoding human secreted proteins - derived from e.g. human blood, kidney, foetal lung, placenta, testes, brain, ovary, pituitary, retina and colon cDNA libraries
Claim 1; Page 95; 641pp; English.
The present sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        therapy.

PS Claim 9; Page 55-60; 90pp; English.

CC This sequence represents a full-length nucleotide sequence that CC codes for human E2A binding protein (E2A-BP, see W36816). It CC was isolated from a human aortic RNA following 3 rounds of 5'RACE CC procedures. E2A-BP is expressed in vascular smooth muscle cells; CC with E2A proteins in vivo, binds to both E12 and E47 and inhibits CC with E2A proteins in vivo, binds to both E12 and E47 and inhibits CC with E2A proteins in vivo, binds to both E12 and E47 and inhibits CC binding of E47 homodimer to an E-box probe (see T97606). Mouse CC see T97611) and rat (see T97612-13) E2A-BP sequences have also been isolated. E2A-BP nucleic acids may be used in gene therapy CC and antisense methods for treating vascular diseases such as arteriosclerosis, to produce transgenic or knock-out animals, as CC well as in methods of producing E2A-BP polypeptides that can be used therapeutically to promote vascular smooth muscle cell growth CC e.g. for wound healing, or to screen for modulator compounds useful e.g. for the treatment of arteriosclerosis and angiogenesis. The CC E2A-BP gene promoter can be used in gene therapy methods to direct vascular smooth muscle cell-specific expression of the E2A-BP gene, antisense sequences or heterologous genes.

for treating fungal infection of e.g. Uromyces appendiculatus, PT Erysiphe graminis, etc. in plants
PS Claim 3; Page 22; 36pp; English.
CC A cDNA library was established from infected tomato plants. The CC library was screened for P14 genes using a probe (Q31657) based on CC the known P14 sequence (EMBO Journal, vol.4. #11, 2745-2749, 1985).
CC A positive clone containing an ORF of 480bp was isolated and CC sequenced. It was found to encode P14a, a 159 amino acid protein CC differing from the previously published P14 protein by 5 additional CC amino acids (at AA positions 99-103, inclusive). The P14a CDNA was CC used to screen a genomic library for other members of the P14 CC family P14a has fungicidal activity and can be used to combat rust CC see Q31652-031660.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score

             /note-*Organ: breast; Vector: puc18; Site_1: SmaI; Site_2: SmaI; A mini-library was made by cloning products derived from ORESTES PCR (U.S. Letters Patent application No. 196,716 - Ludwig Institute for Cancer Research) profiles into the pUC 18 vector. Reverse transcription of tissue mRNA and cDNA amplification were performed under low stringency conditions.*

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polylinker; lst strand cDNA was prepared from pooled bulk breast tumor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digasted with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library is not normalized. (The normalized version of this library is NCI_CGAP_Br2.) Library was constructed by Bento Soares and M. Fatima Bonaldo. "a constructed by Bento Soares and M. Fatima Bonaldo."

bin/display?db-wormace&class-Sequence &object=Y17G7B
Current sequence finishing criteria for the C. elegans genome
sequencing consortium are that all bases are either sequenced
unambiguously on both strands, or on a single strand with both a
dye primer and dye terminator reaction, from distinct subclones.
Exceptions are indicated by an explicit note.
Exceptions are indicated by an explicit note.
IMPORTANT: This sequence is NOT necessarily the entire insert of
the specified clone. It may be shorter because we only sequence
overlapping sections once, or longer because we arrange for a small
overlap between neighbouring submissions.
It may be shorter because we only sequence overlapping sections
once, or longer because we arrange for a small overlap between
neighbouring submissions.
                                                             neighbouring submissions.

The true right end of clone W03C9 is at 100 in this sequence. The true right end of clone Y17G7 is at 143092 in this sequence. The true right end of clone Y17G7 is at 143092 with the end of sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             jes@sanger.ac.uk or rw@nematode.wustl.edu

gene

FEATURES

Exon/Intron boundaries of identified were canonical splice junctions that across the splice junctions.

Location/Qualifiers

genes were maintained

chosen if there sequence continuity

/organism="Homo sapiens"

.144368

The repeat regions shown were identified using RepeatMasker by

Sequence similarities were identified using Powerblast by Jinghui

On Apr 18, 1998 this sequence version replaced gi:3056889.
Sequencing is completed to a minimum standard of double strand sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.
